```c
//C program that simply reads data from a file.
#include<stdio.h>
#include<conio.h>
int main ()
{
    FILE *fptr;
    char ch[100];
    //opening file in reading mode.
    fptr = fopen("output.txt", "r");
    if (fptr == NULL)
    {
        printf("Error to open the file.\n");
        // return from program if file pointer returns NULL.
        return -1;
    }
    // read the text till the newline
    fscanf(fptr,"%[^\n]", ch);
    fclose(fptr);
    return 0;
}
```
